

Product: RSA Authenticators

Solution: Strong Two-Factor Authentication

GuardianEdge solutions and RSA SecurID® Authenticators combine to protect data with strong two-factor identification

When organizations require stronger authentication than passwords alone can provide to protect data stored on laptops, desktops, USB thumb drives and other removable storage media, they need a solution that combines endpoint data protection via encryption with strong two-factor authentication. GuardianEdge Hard Disk Encryption, Removable Storage Encryption and Advanced Authentication support RSA SecurID Authenticators for two-factor authentication, allowing organizations to know that access to data is only possible when users authenticate using both a password and a physical token.

Organizations increasingly need to enable access to information from mobile devices, remotely connected users and internal systems. This requires solutions that both protect the data on these devices, and ensure that only authorized users have access to that data. RSA, the Security Division of EMC, and GuardianEdge combined deliver a stronger solution.

Together, GuardianEdge solutions and RSA SecurID Authenticators:

- Protect organizations from the risks of data breaches for data that is at rest or portable on laptops, desktops, removable media and smartphones with encryption
- Safeguard access to systems and portable information with two-factor authentication—requiring users to know something (a password) and to have something (an RSA SecurID Authenticator) before access to data is allowed.

RSA is the gold standard in identity assurance, with solutions recognized worldwide for bringing trust to millions of user identities, the transactions that they perform, and the data that they generate. RSA SecurID Authenticators work with GuardianEdge Advanced Authentication to provide strong two-factor authentication before access to encrypted data is allowed.

RSA SecurID

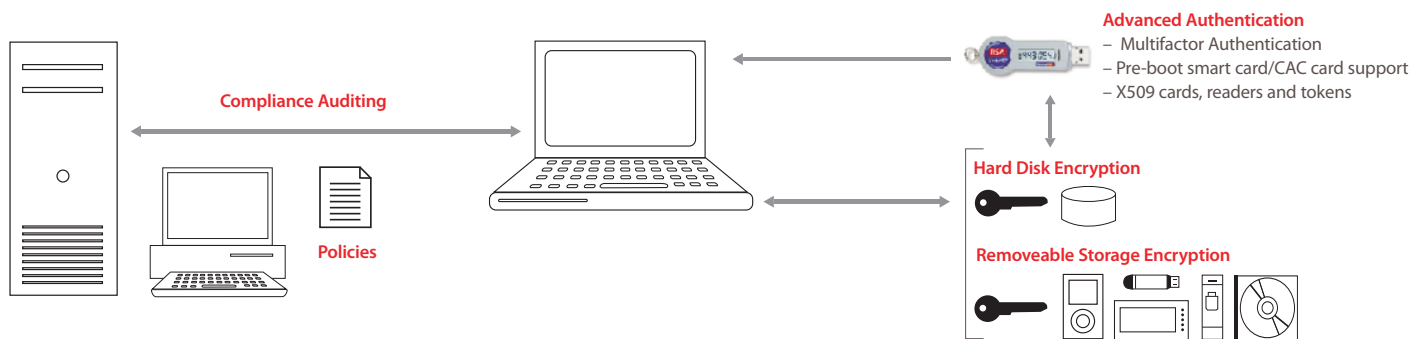

Authenticators:

- The world's most popular and secure enterprise authentication solutions
- Secures internal and remote network access
- Offers easy-to-use, "zero footprint" options
- Available in multiple form factors

GuardianEdge

The leader in endpoint data protection

- Encryption of data on hard disks, removable media/storage devices and smartphones
- Wireless and physical port, device and file-type controls for PCs and smartphones
- Enterprise-class, scalable, policy-based management, auditing and reporting closely integrated with Microsoft® Active Directory®
